### **magneto optic effect lab manual - arts and science**

magneto(optic-effects-introduction: a normally isotropic dielectric (e.g. glass or isotropic crystal) with a single value of relative permittivity  $\epsilon_r$  can become optically active when a magnetic field is applied. the optic axis of this induced optical activity is aligned with the axis of the applied magnetic field.

### **lecture 2 doppler cooling and magneto-optical trapping**

doppler cooling and magneto-optical trapping we have seen in lecture 1 that a laser beam propagating in a direction opposite to the velocity of the atoms can slow down an atomic beam in a zeeman slower. in this lecture, the basics of using radiation pressure for reaching very low temperatures is presented.

### **free-space optical isolators optical isolator tutorial**

an optical isolator is a passive magneto-optic device that only allows light to travel in one direction. isolators are used to protect a source from back reflections or signals that may occur after the isolator. back reflections can damage a laser source or cause it to mode hop, amplitude modulate, or frequency shift. in high power applications,
